About me

I'm currently a second-year undergraduate student at Carnegie Melon University studying Statistics & Machine Learning with a minor in Computer Science and Chemistry. Feel free to check out my up-to-date resume.

I recently changed pursuits from medicine to CS, so I've been attending hackathons to learn as much as I can! Take a look at what ideas I've been trying to bring to life in the projects section above!
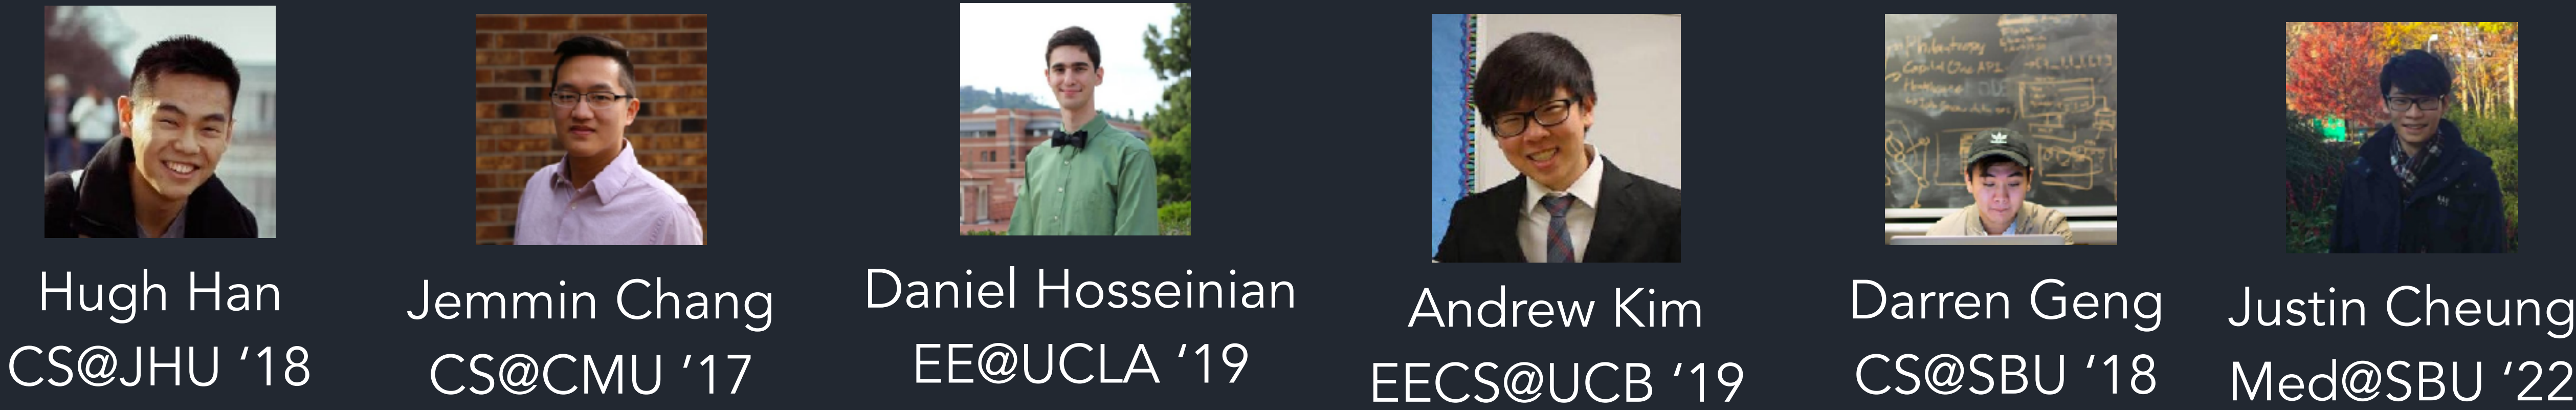

Outside of academia, I have interests in photography and long-distance running. I'm running the Pittsburgh Marathon this year (excited to cross that off my bucket list!) for Living Ministry, a foundation that extends Christ's love to the homeless by providing basic needs, offering tools for self-sufficiency, and providing opportunities for community involvement.You can pledge to support Living Ministry by sponsoring me as a runner (100% of what you pledge will go to Living Ministry). Click here for more information. I also love weightlifting, and I dabble in a bit of guitar.
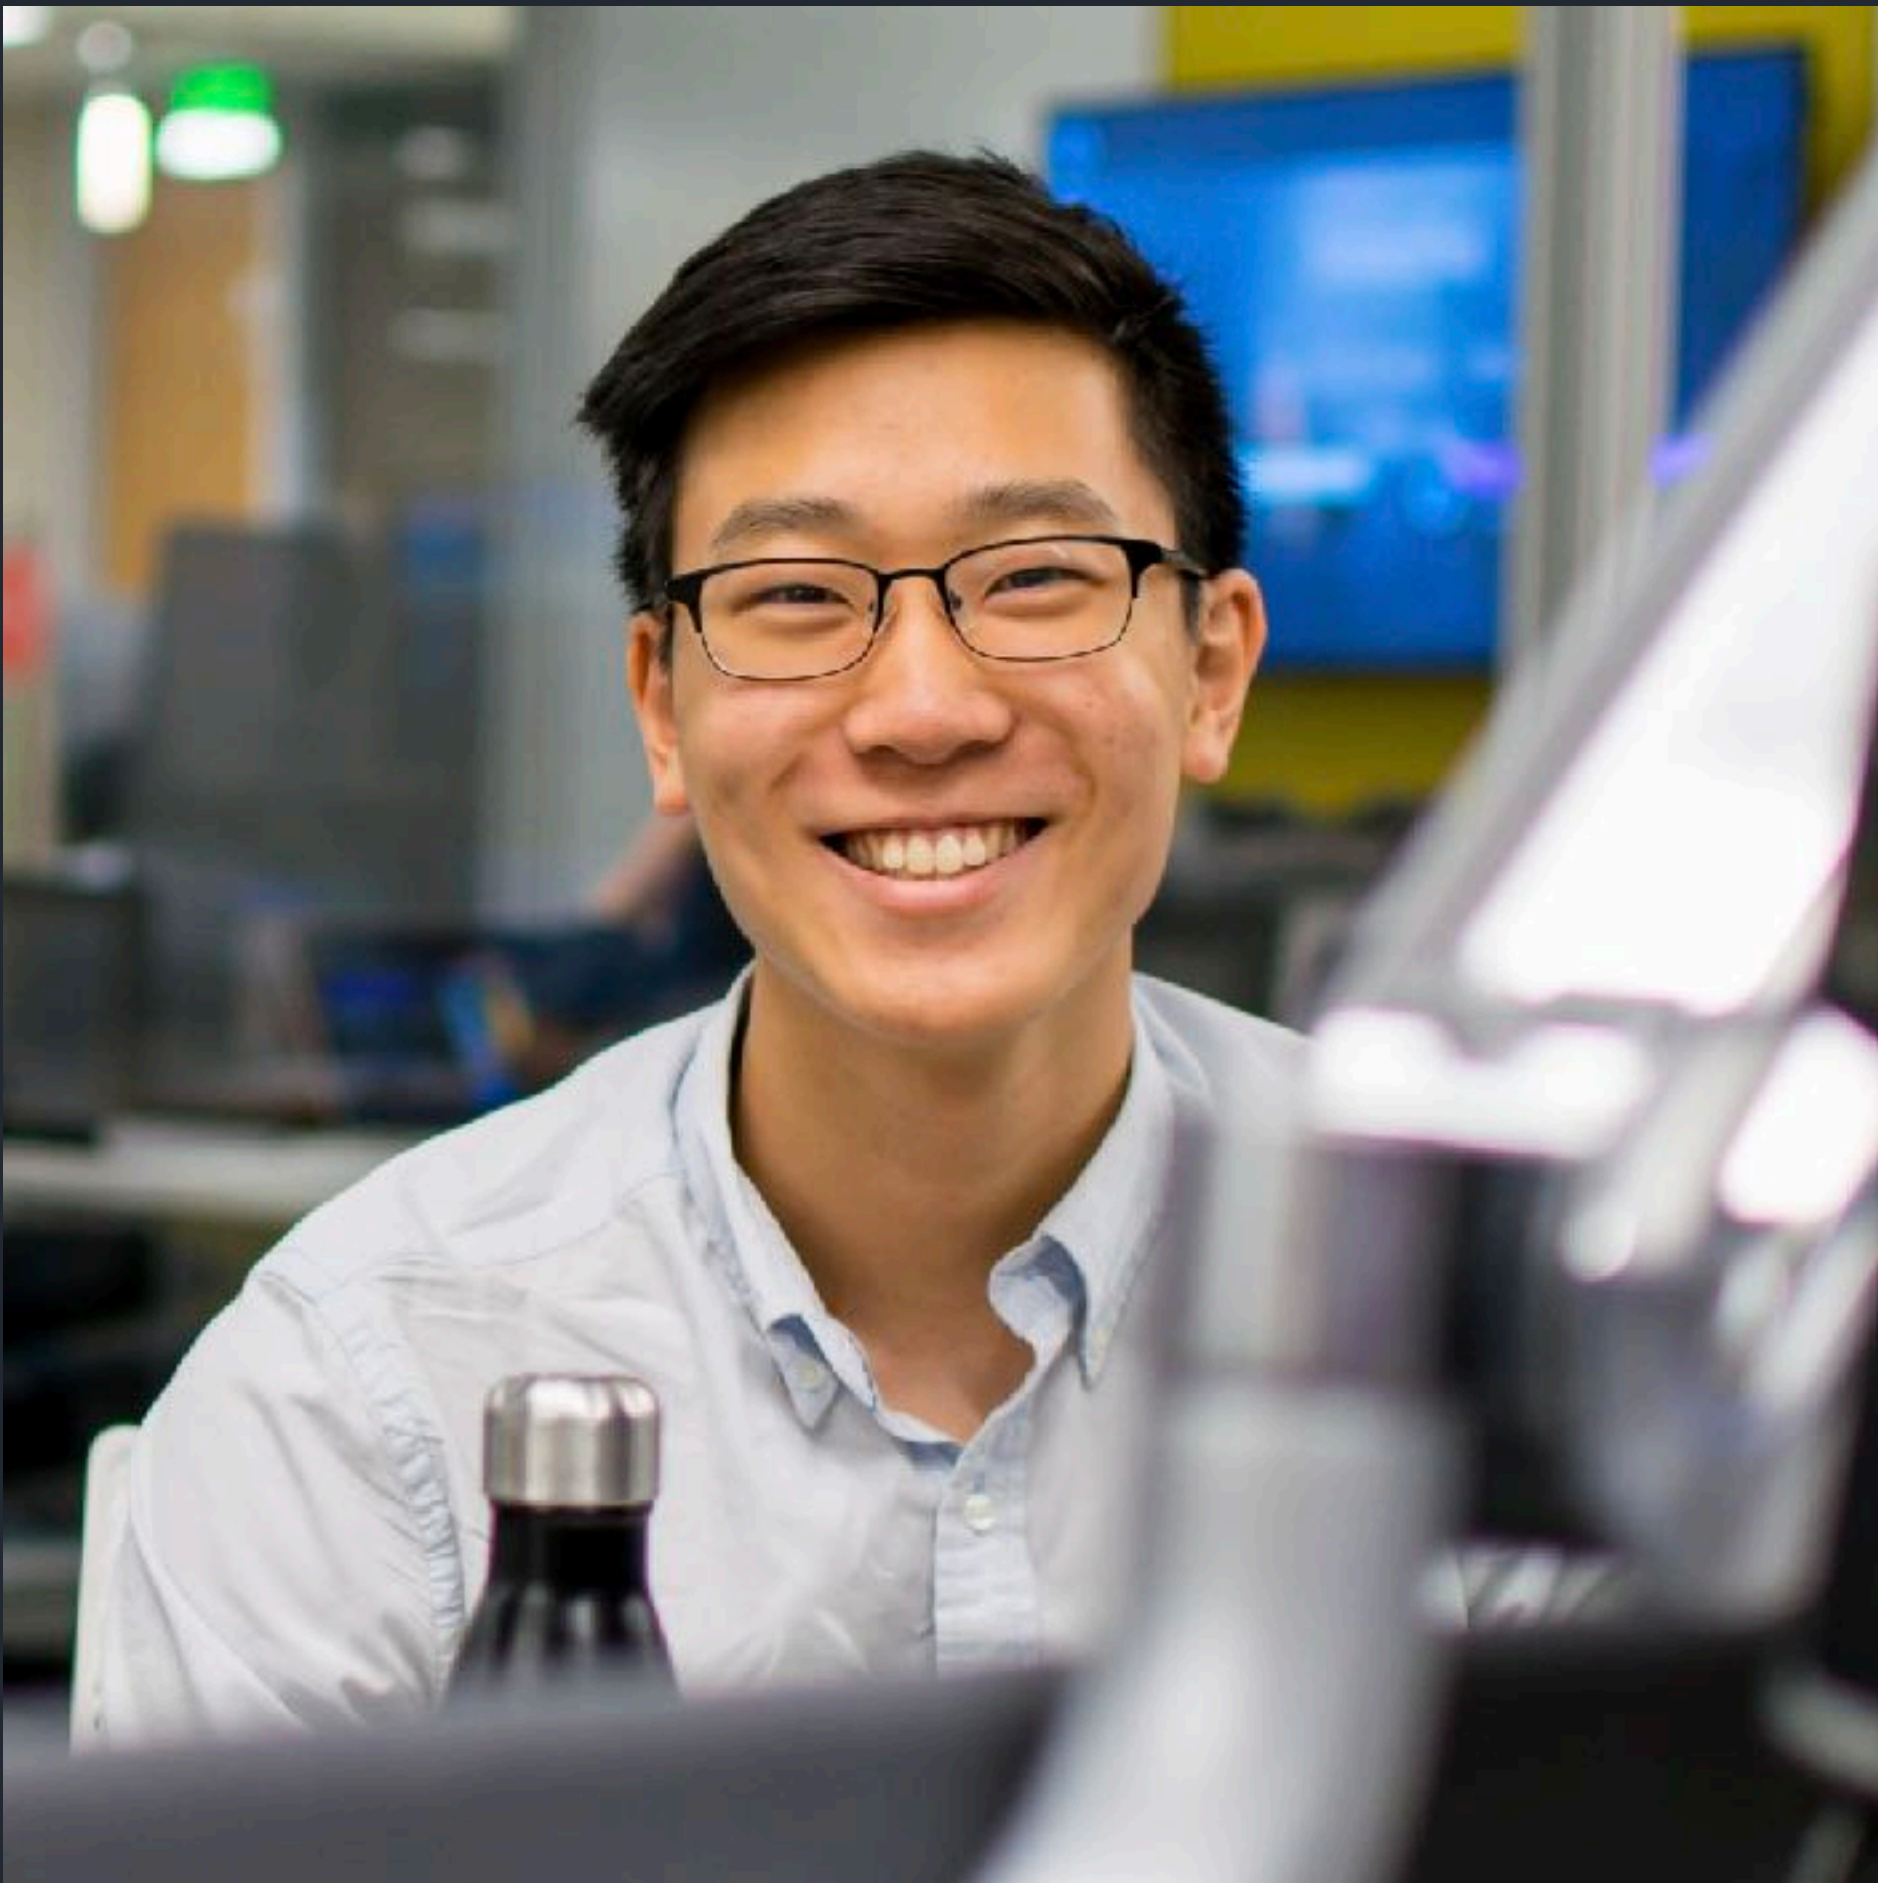

Programming Langauges
Python, C0, Java

Tools & Frameworks
Django, Angular2, Git, HTML/CSS, Vim, LATEX
